SUBJECT: Reply to your letter No. ITF-IRD.SER.018/2007 OUT dated 25th July 2007

Dear Madam/Sir,

The Company PMC Engineering Ltd. has performed works on searching, locating, removing and destroying the unexploded ordnance (UXOs) in the Danube River in the area of destroyed bridges near Novi Sad, 150 m upstream from the Sloboda Bridge to 150 m downstream from the Žeželj Bridge at length of about 5 km which amounts to about 3,000,000.00 m².

For this purpose the Company PMC Engineering Ltd. was developed and applied a specific technology and organization study based on which new methods for search and identification of unexploded ordnance were implemented while searching was performed with devices and equipment of last generation so that tender conditions and requirements of the International Standard for Humanitarian Demining (IMAS) were fully satisfied with 99.6% probability of area clearance from unexploded ordnance. Clearance was performed fully in accordance with tender conditions and it was guaranteed that there is no unexploded ordnance to depth of 3 m under the river bed.

Please find enclosed final certificates issued by the Danube Commission (Client) confirming that works were successfully performed.

Yours faithfully

DIRECTOR
Dragoljub Cvetković
